

HIGHLIGHTS

- PST to O365 Migration
- 46,000+ PST Files
- 6,000 Users
- 22Tb Data
- 16 File Servers
- 3 Data Centres
- 10 Regional Locations

CHOOSING ULTIMATE MIGRATOR

Ultimate Migrator is committed to delivering software that works. We help you discover messaging data and then move it between platforms quickly, reliably and securely. We are asked to migrate some of the World's most complex messaging environments by some of the largest global organisations including banks and governments.

With a highly technical and business-aware team, Ultimate Migrator is focused on simplifying this notoriously painful process and providing a straight forward solution.

Ultimate Migrator provides a cost effective service that has minimum impact on users and reduces the demands on internal IT staff and the support infrastructure.

U.S. Federal Government Department

The Customer

Created in 1980 by combining offices from several federal agencies, the department's mission is to promote achievement and preparation for global competitiveness, by fostering excellence and ensuring equal access. With a \$68 billion budget at its disposal, the department's employees are dedicated to distributing and monitoring those funds, undertaking research into relevant issues and promoting equal rights for everyone.

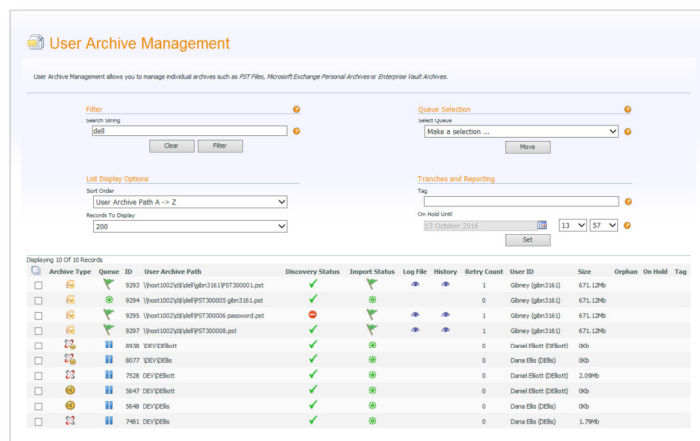

The Requirement

Following a successful migration from Exchange to Office 365, attention turned to the remaining messaging data and its subsequent move into the cloud. With 46,000+ PST files spread across a number of locations, it quickly became apparent that manually collecting, assigning ownership, renaming and then uploading them onto the Microsoft infrastructure was an impossible task. The customer needed an automated solution.

“The service has been one of the best from any vendor”
Client Advocate, U.S. Federal Government

The Solution

Having been shortlisted and presented to the departments outsource IT partner by Microsoft, Ultimate Migrator was chosen as the preferred solution for a number of reasons. These included the fully automated workflow from source to destination, distributed architecture, granular reporting and the support for Enterprise Vault. The distributed nature of our software made it easy to deploy remote agents to the regional locations, allowing us to find and analyse files while minimising WAN traffic. Using the ownership information collected during the discovery process and one or more rules, each PST file was automatically assigned an owner. The files were then collected, compressed, corruptions removed, given unique names and stored locally for onward transfer to Microsoft using their drive shipping facility. Our software even created the mapping file ... everything fully automatic from start to finish!
