

HIGHLIGHTS

- Enterprise Vault migration
- 180K mailboxes
- Migration completed in 18 months vs. projected 10 years
- Achieved with minimal disruption

CHOOSING ULTIMATE MIGRATOR

Ultimate Migrator is committed to delivering software that works. We help you move messaging data between platforms quickly, reliably and securely. We are asked to migrate some of the World's most complex messaging environments by some of the largest global organisations including banks and governments.

With a highly technical and business-aware team, Ultimate Migrator is focused on simplifying this notoriously painful process and providing a straight forward solution.

Ultimate Migrator provides a cost effective service that has minimum impact on users and reduces the demands on internal IT staff and the support infrastructure.

NHS Wales

The Customer

NHS Wales, a national healthcare organisation, required a modern and compliant IT infrastructure to support its extensive operations. As part of this initiative, they needed to migrate 180,000 email mailboxes from their legacy Enterprise Vault (EV) archive to NHSMail while ensuring data integrity, security, and minimal disruption to healthcare services.

The Requirement

NHS Wales initially attempted to manage the migration manually, relying on spreadsheets and labour-intensive processes. However, the sheer scale of the project posed significant challenges:

- **Error-Prone Processes** – Manual tracking increased the risk of data misplacement or incomplete transfers.
- **Extended Timeline** – A projected 10-year timeline threatened to lock NHS Wales into outdated infrastructure, delaying modernisation.
- **High Operational Costs** – Prolonged manual labour led to excessive personnel costs and resource strain.

Faced with these limitations, NHS Wales sought an automated, scalable solution that could complete the migration efficiently and ensure compliance with data management regulations.

The Solution

Recognising the need for a more effective approach, NHS Wales partnered with **Ultimate Technologies** to deploy **Ultimate Migrator**, a powerful, automated migration tool.

How Ultimate Migrator Transformed the Migration

1. **End-to-End Automation** – The entire migration process, from data extraction to final placement in NHSMail, was automated, eliminating manual intervention and reducing the risk of errors.
2. **Scalability** – The distributed architecture enabled NHS Wales to process large volumes of data simultaneously, significantly accelerating the migration.
3. **Security & Compliance** – Ultimate Migrator maintained a strict chain of custody for all emails, ensuring regulatory compliance and data integrity.
4. **Minimal Disruption** – By preserving email shortcuts and folder structures, the solution ensured a seamless transition for end-users with little to no disruption.

Implementation and Results

- **Project Duration:** Reduced from 10 years to just **18 months**.
- **Cost Savings:** Automated processes cut operational expenses and avoided the costs of maintaining outdated infrastructure.
- **Regulatory Compliance:** The migration met all data security and governance requirements without additional effort.
- **User Experience:** Employees transitioned smoothly to NHSMail without losing access to critical archived emails.

Conclusion

NHS Wales' successful migration showcases the power of **Ultimate Migrator** in handling complex, large-scale data transitions. By leveraging automation, scalability, and compliance-focused technology, the project was completed ahead of schedule and within budget.

For organisations facing similar challenges, **Ultimate Migrator** delivers a proven solution for secure, efficient, and disruption-free email migrations.
